

# Nemesis – Networking Product Erasure

The fully automated, standalone, high-efficiency system for Data Erasure, Repair & Test with full Production Management & Asset Control

## Higher quality, productivity and yields.

Nemesis revolutionises efficiency by automating a traditionally manual operation while removing the risk of human error. The streamlined process empowers the recovery of products affected by corrupt or missing operating systems, leading to higher yields, less waste, and increased revenue streams during the remarketing process.

## Simple to operate system.

Once the device is connected, you can initiate the automated process by pressing the 'push-to-start' button on the touchscreen. Nemesis will then immediately recognize the device and execute the advanced routine, which will overwrite all prior configurations, passwords, and IP addresses, ensuring that all licenses and operating systems are preserved.

## Highly compatible.

Nemesis is designed to work with a broad range of networking products and the supported list of devices is continuously expanding. Whenever new updates are released, you will see an update button on the Nemesis touch-screen. The latest version of Nemesis can be easily downloaded from the Ultratest cloud, ensuring that you always have access to the most up-to-date software.

Scan the QR code or visit [ultratestsolutions.com/nemesis-supported-devices](http://ultratestsolutions.com/nemesis-supported-devices) for latest supported devices.

## Features

- Fully automated process – Single Push-to-Start
- Unique advanced overwrite for data erasure
- Audit trail of all assets processed
- Wide range of Networking Products supported;
  - Routers
  - Switches
  - Firewalls
  - Access Points
- Escalated new device support (possible charges)
- Retain licences on device & in cloud
- Fix corrupted OS
- OS Updates (for Approved Vendor Partners)
- Downloadable full test logs via online portal
- Software updates via the cloud
- ADISA Product Claims Test

## Why Nemesis?

Nemesis is the ultimate solution for erasing, testing and repairing networking devices. Building upon the success of Genesis, the industry's leading solution for the repair & data erasure of hard drives and SSDs, Nemesis delivers similarly advanced functionality for networking products. It is built on the robust and reliable Ultratest cloud platform, providing unparalleled automation for remarketing and redeploying networking devices.

Nemesis sets new standards for device erasure with its use of advanced overwrite techniques, which go beyond the outdated standard clear/format procedures. This approach makes Nemesis fully ADISA-certified, ensuring top-level security and reliability. Trust Nemesis to provide the best possible solution for your networking product needs.
